Summary

Full Stack Web & Software Developer with 3+ years of experience building dynamic web applications and individual software solutions using Python, PHP 8.3 (OOP), MySQL, HTML5, CSS3, JavaScript, TypeScript and the MERN stack (MongoDB, Express.js, React.js, Node.js). Proven ability to develop and implement new features, analyze and resolve complex errors independently, and deliver high-quality web projects with hands-on experience across projects including HustleHub, Resume Analyzer, and MovieApp. A solution-oriented team player who thrives in interdisciplinary Agile environments, passionate about sharing knowledge and continuously growing and currently advancing German language skills towards B1.

Experience

Working Student - Full Stack Software Developer

Technische universität Munich

Jan 2025 - Present

Remote, Germany

- Designed and implemented new features and functionality using PHP 8.3 (OOP) and MySQL, contributing to dynamic web projects and internal software solutions.
- Developed and maintained RESTful APIs to enhance system functionality; refactored existing codebase to MVC architecture for improved maintainability.
- Analyzed errors and bugs, identified root causes, and independently resolved issues or proposed solutions collaboratively within the team. Implemented authentication using OAuth 2.0 and worked with TYPO3 for content-driven web applications.
- Applied Agile/SCRUM methodology with Git flow, Docker, and CI/CD pipelines for efficient collaborative development.

Master Thesis Carla Simulation Based for Non-Systematic Traffic

Vehicles

Technische universität Chemnitz

Jul 2024 - June 2025

Chemnitz, Germany

- Designed a simulation model to identify whether vehicles are manually driven or autonomous using trajectory estimation algorithms with AI, computer vision techniques, and machine learning.
- Applied image preprocessing techniques, trained, and analyzed the model with Python and libraries such as NumPy, OpenCV, PyTorch, and Ultralytics.
- Used Carla simulation to study and interpret complex traffic behavior, contributing to advancements in autonomous vehicle systems.
- generated graphs for Precision, Recall, F1 and mAP, Confusion Matrix using NumPy, PyTorch, Scikit-learn libraries.

Internship - Software Developer

John Deere Werk

March 2023 - Aug 2023

zweibrücken, Germany

- Implementation of control of three sub-systems in the existing mechatronic system.
- Development and implementation of surfaces for the user interface(UI).
- The development of C# programs for controlling the actuators via the machine CAN bus network using vector tool. Writing documentation for non-specialist employees.

Software Developer

June 2019 - Sept2021

Nexcode InfoTech

Gujarat, India

- Developed and maintained responsive web pages with modern layouts using HTML5, CSS3, JavaScript, TypeScript, and Angular, ensuring seamless cross-device user experiences.
- Implemented and maintained RESTful APIs using the FAST API framework; developed backend services using Node.js and MongoDB.
- Built dynamic and effective Angular components, enhancing both application functionality and user interfaces. Worked with CI/CD pipelines, Docker, and Git in an agile development environment.

Education

M. Sc. in Web Engineering

Technische Universität Chemnitz

since April 2026

Chemnitz, Germany

M. Sc. in Automotive Software Engineering

Technische Universität Chemnitz

Oct 2021 - Dec 2025

Chemnitz, Germany

B. Sc. in Computer Engineering

Gujarat Technological University

Aug 2016 - Aug 2020

Gujarat, India

Technical Skills

Tech stack :	HTML5, CSS3, JavaScript, TypeScript, GSAP, React JS, Angular 2+, Python, PHP 8.3 (OOP), Vue.js, MySQL, PostgreSQL, RESTful API, Swagger, Git, Docker, TYPO3, Agile Methodology / SCRUM, CI/CD Pipeline,
AI & Machine Learning :	Object detection algorithm YOLO, PyTorch, NumPy, Scikit-Learn, Ultralytics, Trajectory Estimation algorithm, Roboflow,
Basic :	Redis, Celery, Azur Cloud
Tools :	PHPStorm, WebStorm, PyCharm, Visual Studio Code, GitHub, GitLab, Vite, Postmann, Webpack, Claude, Chat GPT, GitHub Copilot, Cursor

Projects
